

**FOR IMMEDIATE RELEASE:****SCP SCIENCE Announces New Building Expansion**

(Montreal, October 26<sup>th</sup>, 2011) - **SCP SCIENCE** is pleased to announce a new building expansion to construct a 34,500 sq ft extension to SCP SCIENCE's 40,000 sq ft existing building located in the Baie D'Urfé suburb of Montreal, Québec, Canada. Completion and move in is scheduled for the end of February, 2012.

The new, temperature controlled building is directly connected to the current facility and was designed to include existing production and an expanded number of new manufacturing units. Special services will be installed to support injection moulding, machining, plastic extrusion, glassblowing, chemistry labs, and a coating department as the company ramps up its manufacturing. New production machinery is being added to increase capacity for current products and to produce an extensive list of new items to be introduced in 2012 under the various SCP SCIENCE brands.

Laboratory space for Inorganic and Conostan chemistry departments is being substantially increased and the Quality Control department will see additional work stations and better equipped testing facilities. By spring 2012, manufacturing will include 11 different production units when the building and the production machinery are fully implemented.

To watch the construction materialize, visit us on [Facebook](#).

**About SCP SCIENCE**

Founded in 1980, **SCP SCIENCE** is a successful privately owned manufacturer and distributor of analytical equipment, supplies, standards, reagents, and certified reference materials for the inorganic analytical laboratories market. The company has multiple manufacturing units for instruments, glass and quartz ware, plastic ware and aqueous and oil based standards.
